Peptide Therapy

Growth Hormone Releasing Peptides

As we continue to age, our bodies begin to produce less growth hormones. In order to combat this, we use growth hormone releasing peptides. Different peptides will signal your pituitary gland to release more growth hormones into your body. Some benefits from peptide therapy are:

- better sleep
- fat loss
- muscle & strength gain
- faster recovery
- improved health
- reduce risk for heart disease
- increase skin elasticity & hair health

Sermorelin

One of the original Ghrps. It stimulates the release of growth hormones. Benefits are:

→ increase lean body mass → metabolize fat more efficiently → increase energy → bone density improvement → improvement in overall health

Cjc1295/Ipamorelin

Improve athletic performance by maximizing growth and less recovery time. This blend also improves memory, focus and mental clarity in your everyday life.

Benefits are:

→ increase muscle mass & strength → accelerated recovery & repair → burn more body fat → improve sleep quality → increase cognitive function

Tesamorelin

Currently the most effective growth hormone available with a host of other benefits which included:

→ releasing 5x more GH → specifically reduces VAT (belly fat) →improvement in lean muscle & strength →decreased cholesterol & triglycerides →improved sleep & recovery

Muscle & strength Peptides

Fast acting muscle building peptides. Regardless if the goal is fat loss or muscle building the benefit to maintaining & building strength & muscle is a key to success.

Igf-1 Lr3

→ enhance muscle mass & strength → reduces muscle wasting → supports fat loss → decrease inflammation & autoimmunity → improve gut health & collagen production

Mk-677 Capsules

→Increase fat-free muscle mass → improved endurance → stronger & denser bones → increase appetite → longer REM sleep

Nootropics/Brain Health and Energy Peptides

The fountain of youth peptides. Offering a wide variety of benefits including increased brain function, anti-aging, weight loss, role in energy metabolism and reduced brain fog, lack of focus and cognitive decline.

Nad+

→Increased energy from improved ATP production → mentally clarity →reduces brain fog →anti-ageing →improved athletic endurance →reduces symptoms of chronic fatigue

5 Amino-1MQ capsules/injectable

→Blocks NMNT resulting in higher Nad+ levels →improved mood →increased energy, memory & focus → aid weight loss → reduces risk of diabetes, cancer, cardiovascular disease →reduces obesity

Pe 22-28 nasal spray

→Fast acting, upregulates neurogenesis faster antidepressants →Easy nasal spray application →Helps reduce anxiety & depression especially during stressful/traumatic situations

Dr. Weight Loss
of Atlanta

Fat loss Peptides

The formula for weight loss has always been the same calories in vs calories out. These peptides help with either side of the formula or both. Helping reduce calories in via appetite suppression or increasing calories out via increased metabolic rate.

Aod-6904 capsules / injectable

→Upregulates metabolism through growth hormone → increases lipolysis, which is fat metabolism → side effect free →stacks well with most peptides

Mots-c

→Increase energy expenditure →increases metabolism →reduction of fat accumulation →regulates insulin sensitivity → improves glucose utilization

Tesofensine capsules

→Increases resting energy expenditure → regulates appetite → mood boost →large increase of energy levels → fast acting, helps kick start fat loss

Glps Peptides

Glp stands for glucagon-like peptide. Once a week injection is subcutaneous. Dramatically reduces appetite allowing greater calories deficit without struggling through strong hunger pains

Semaglutide

→ One of the original Glp-1s →reduces appetite → lowers & balances blood sugar levels → slows down gastric empty resulting in feeling fuller long

Tirzepatide

A step above Semaglutide with double Glp agonist

→ More effective weight loss →Stronger reduction in appetite → less side effects → less dose adjusting needed than semaglutide

Retratrutide

Most effective Glp on the market with a triple Glp agonist

→ 3x as much signaling to feel full faster →maintains feelings of being full for extended periods → allows for greater calorie deficit →higher muscle retention compared to tirzepatide & semaglutide

Anti Inflammatory, healing Peptide/ Skin & hair Peptide

Bpc - 157 injectable or capsules

→accelerate healing on injuries, aches and pains →decrease inflammation
→improved recovery for performance athletes → tendon & ligament repair
→gastrointestinal health by healing ulcers

GHK-Cu topical foam / Injectable

→reduce inflammation →improve skin firmness, elasticity & clarity
→ smooth rough skin → tighten loose skin → reverse thinning of aged skin
→ increase hair growth & thickness

Sexual Health

Pt 141 Injectable / Nasal Spray

→increasing sexual desire, arousal, satisfaction and overall sexual well being
→acts on central nervous system →No dependency building
→does not rely on a vascular mechanism unlike mainstream drugs

Oxytocin Troche / Nasal Spray

→regulates our emotional responses & pro-social behaviors →increases general sense of well being trust, positive memories & bonding cues →easy application via troche or nasal spray →similar feels of “liquid courage” without the loss of coordination
